

PharmNest Technologies

MVP Feature Specification & Build Blueprint

Version 1.0 | June 2026 | Confidential

Founder & CEO Devansh	Pilot Cities Jabalpur + Maihar	Target Build 20 Weeks
---------------------------------	--	---------------------------------

1. MVP Philosophy & Core Principles

PharmNest MVP = 3 flows only: OTC (nearest pharmacy) | Rx (via Doctor Referral) | Intercity (via Shiprocket)

The MVP is NOT the full product. It is the minimum experience that proves three things:

- Patients in Tier 2/3 cities will order medicine via app/WhatsApp
- Pharmacies will accept digital orders and fulfill within 30 minutes
- Riders can be managed on a per-order earnings model

What MVP deliberately excludes:

- AI symptom-to-medicine recommendation (legal risk — CDSCO violation)
- Live doctor video consult (too complex for MVP)
- Smart Store hardware bundle (Phase 1 post-MVP)
- Wholesaler POS module (Phase 2)
- Insurance Claim Assistant (Phase 2)
- ABHA/ABDM full integration (Phase 2)

2. Core MVP User Flows

2A. Patient Flow

Step	Action	Notes
1	Open App → Login via OTP / Gmail	Firestore OTP via MSG91, Google Sign-In
2	Enter basic profile: Name, Age, Gender	One-time setup, stored in Supabase
3	Grant location access	Used to find nearest partner pharmacy
4	Browse medicine catalogue from nearest store	OTC medicines shown immediately
5	Search by medicine name OR disease/symptom	Symptom search = show medicine NAMES only, no AI recommendation
6	Upload prescription (if Rx order)	Photo upload → pharmacy verifies manually
7	Enter Doctor Referral Code (DR-NAME-CITY)	Optional but unlocks Rx ordering
8	Select medicine → Add to cart → Review order	MRP shown, pharmacy-uploaded inventory
9	Choose payment: UPI / COD	Razorpay Route for UPI; COD collected by rider
10	Place order → See 30-second pharmacy timer	Rapido-style countdown
11	Live rider tracking on map	After rider accepts pickup
12	OTP confirmation on delivery	Rider enters OTP shown on patient screen
13	Rate experience → Wallet cashback credited	First order: ₹20 cashback

2B. Pharmacy Flow

Step	Action	Notes
1	Login via OTP / Gmail	License number + basic details at onboarding
2	Upload medicine list + MRP	PDF upload / photo / manual entry — all 3 supported
3	Receive order notification	Push + SMS alert; 30-second accept window
4	Accept order → Review Rx if uploaded	Rx visible on screen; Schedule H/H1/X flagged
5	HERO FEATURE: Photo medicine + barcode scan before packing	Captures actual MRP, expiry date, batch number
6	System checks: medicine matches Rx + expiry valid	Auto-mismatch → order rerouted to next nearest pharmacy
7	Pack in PharmNest branded pouch (₹8 provided)	Pharmacist marks 'Packed'

8	Video/photo of packed order → auto-sends to patient WhatsApp	Message: 'Your order is packed. Rider on the way!'
9	Rider assigned → pharmacist hands over order	OTP from rider required for handoff
10	Daily earnings summary visible on dashboard	Settlement via Razorpay Route (T+2)

2C. Rider Flow

Step	Action	Notes
1	Login via OTP / Gmail	Aadhaar-verified onboarding
2	Enter basic details	Name, vehicle, bank account for payouts
3	Accept Terms & Policy	Earnings model explained clearly
4	Toggle availability: Online/Offline	Rapido-style availability switch
5	Receive order request	Pharmacy name + patient drop location shown
6	Accept/Decline within 15 seconds	Auto-declines if no response
7	Navigate to pharmacy (Google Maps deep link)	OTP from pharmacy for pickup confirmation
8	Pick up order → Navigate to patient	Live location shared with patient
9	Patient gives delivery OTP	Fraud prevention
10	Earnings updated instantly	Dashboard shows today/week/month

2D. Doctor Portal Flow

Step	Action	Notes
1	Doctor registered by PharmNest team (manual at MVP)	DR-NAME-CITY code generated
2	Doctor shares referral code with patients via WhatsApp	Simple share button provided
3	Patient uses code to unlock Rx ordering	Code tied to doctor ID in database
4	Doctor sees monthly referral analytics	How many patients ordered via their code
5	Monthly PDF report shared via WhatsApp/email	Professional, shareable with clinic staff

3. Hero Feature — Video Verification Before Packing

□ **This is PharmNest's #1 differentiator. No Indian pharma app does this at MVP.**

What it does:

- Before packing, pharmacist scans barcode OR photographs medicine strip
- System reads: actual MRP, expiry date, batch number
- Auto-compares with prescription details (if Rx order)
- If mismatch → order DECLINED → auto-routed to next nearest pharmacy
- Short video/photo of packed order sent directly to patient's WhatsApp
- Patient receives: 'Aapki dawa pack ho gayi. Rider raste mein hai!'

Why patients trust it:

- They can SEE their medicine before it leaves the pharmacy
- No duplicate/expired medicine risk — visible proof
- Builds repeat ordering behaviour from Day 1

MVP Pragmatic Build Note:

- Full barcode scan = MVP (use camera + ML Kit for barcode)
- Photo-only mode as fallback if barcode unreadable
- WhatsApp send via MSG91 WhatsApp Business API

4. Rider Economics & Delivery Fee Model

Distance-based slab model — Fair for riders, sustainable for platform

Slab	Distance	Customer Pays	Rider Gets	Platform Gets	Packaging Cost	Net Platform
Slab 1	0–3 km	₹49	₹35	₹14	₹8	₹6
Slab 2	3–6 km	₹59	₹42	₹17	₹8	₹9
Slab 3	6–10 km	₹79	₹55	₹24	₹8	₹16
Free Delivery	₹500+ order	₹0 (absorbed)	₹35 min.	Pharmacy absorbs ₹35	₹8	–₹8

Key Rules:

- Distance calculated: Pharmacy location → Patient GPS coordinates
- Packaging cost (₹8) = PharmNest branded pouch + sticker, given to pharmacy in monthly batch supply
- COD orders: Rider collects cash, deposits to PharmNest account weekly
- UPI orders: Razorpay Route splits payment automatically at checkout
- Rider payout: Weekly NEFT/UPI to registered bank account
- Bonus: 10 orders/day = ₹50 bonus (Rapido-style gamification, Phase 1)

Why this model works for Tier 2/3:

- ₹49 delivery fee is LESS than auto-rickshaw fare in Maihar/Satna — price-justified
- Rider gets ₹35 for 0–3 km in <20 mins = ₹105/hour theoretical — competitive
- Platform earns enough to cover MSG91 SMS + server costs per order at scale

5. Complete Feature Priority Matrix

5A. Patient App Features

Feature	Purpose	Priority
WhatsApp OTP login / Gmail	Zero-friction entry	P0
Location access for nearest pharmacy	Core routing logic	P0
Medicine catalogue from nearest store	Primary browse	P0
Search by medicine name	Discoverability	P0
Search by disease/symptom (name only)	Patient ka naam nahi pata — solved	P0
Prescription upload (photo)	Rx order flow	P0
Doctor Referral Code entry (DR-NAME-CITY)	Trust + acquisition	P0
UPI + COD payment options	Conversion	P0
30-second pharmacy accept timer	Rapido-style urgency	P0
Live rider tracking on map	Trust + retention #1	P0
Push notifications at every stage	Engagement loop	P0
OTP-based delivery confirmation	Fraud prevention	P0
Order history + 1-tap reorder	Chronic patient retention	P0
Wallet cashback system	Acquisition + retention	P1
Medicine reminder (post-delivery)	Stickiness	P1
Generic alternative suggestion	Value perception	P1
Delivery experience rating	Quality control	P1
ABHA ID linking (optional)	Future-ready	P2
AI symptom → medicine (doctor-reviewed)	Advanced feature	P2

5B. Pharmacy Partner App Features

Feature	Purpose	Priority
OTP/Gmail login + license onboarding	Verified partner entry	P0
Medicine list upload (PDF/photo/manual)	Inventory setup	P0
Order dashboard (New/Accepted/Packed/Dispatched)	Core ops	P0
30-second accept window with push alert	Speed SLA	P0

Rx prescription viewer	Legal compliance	P0
Schedule H/H1/X flag on order screen	Compliance protection	P0
Photo + barcode scan before packing (HERO)	Trust differentiator	P0
Mismatch detection → auto-reroute	Quality assurance	P0
Video/photo → WhatsApp to patient	Transparency + trust	P0
PharmNest branded pouch supply	Brand building	P0
Mark OOS (out-of-stock) instantly	Reduces failed orders	P0
Daily earnings summary	Retention motivation	P0
Razorpay Route auto-settlement (T+2)	Financial trust	P0
DR code analytics (orders per referral)	Shows network value	P1
Monthly settlement PDF report	Professional record	P1
Generic substitution suggestion (if OOS)	Saves order from cancelling	P1
Packing slip print / PDF	Operations	P1
Low-stock smart reorder alert	Inventory stickiness	P2

5C. Rider App Features

Feature	Purpose	Priority
OTP/Gmail login + Aadhaar verify	Trusted rider entry	P0
Basic details + bank account setup	Payout readiness	P0
Terms & earnings model explainer	Informed consent	P0
Online/Offline availability toggle	Rider control	P0
Order request card (pharmacy + drop location)	Operational clarity	P0
Accept/Decline in 15 seconds	Speed SLA	P0
Google Maps deep link navigation	Practical utility	P0
OTP from pharmacy (pickup confirmation)	Fraud prevention	P0
OTP from patient (delivery confirmation)	Fraud prevention	P0
Live location sharing with patient	Trust + tracking	P0
Earnings dashboard (today/week/month)	Motivation	P0
Cash vs UPI payment indicator per order	No delivery confusion	P0
Weekly payout summary	Financial trust	P0
Rating visible to rider	Quality incentive	P1

Daily delivery bonus badge (10 orders = ₹50)	Gamification	P1
--	--------------	----

5D. Doctor Portal Features

Feature	Purpose	Priority
Unique DR-NAME-CITY referral code	Identity + acquisition	P0
WhatsApp share button for code	Viral loop	P0
Patient order count via code (dashboard)	Proof of impact	P0
Monthly referral analytics report (PDF)	Professional + shareable	P1
Rx history per patient (with consent)	Clinical continuity	P2
Incentive dashboard (rewards for referrals)	Future retention	P2

6. Retention Loop — How All 4 Stakeholders Stay

The goal: every stakeholder has a reason to come back tomorrow

Stakeholder	Why They Come Back	Key Retention Feature
Patient	Fastest medicine in their city + cashback + reorder memory	1-tap reorder + medicine reminder + wallet
Pharmacy	Guaranteed orders without marketing spend + auto-settlement	Daily earnings summary + DR code analytics
Rider	Predictable income + transparent per-km model	Earnings dashboard + bonus gamification
Doctor	Patients are actually buying prescribed medicines	Monthly referral report + order count dashboard

The Flywheel

Doctor gives DR code → Patient downloads + orders → Pharmacy packs (video proof) → Rider delivers (live tracked) → Patient rates + gets cashback → Medicine reminder triggers → Patient reorders → Doctor sees impact → Doctor refers more patients → Flywheel accelerates

7. Legal & Compliance — Non-Negotiables

☐ These are NOT optional. Handle before first real patient order.

Risk	What To Do	Urgency
Trademark filing — 'PharmNest' in Class 44	File immediately — confirmed available	☐ NOW
Co-Founder Agreement (60/25/15 split)	Sign with Aadhaar eSign before any build spend	☐ NOW
Healthcare lawyer consultation	Mandatory before first real patient Rx order	☐ WEEK 1
Schedule H/H1/X compliance display	Flag on every Rx order screen (pharmacy + patient)	☐ MVP
CDSCO — no AI medicine recommendation	AI symptom → medicine is illegal without licensed doctor in loop	☐ MVP
Prescription storage	Uploaded Rx must be stored securely (DPDP Act 2023 compliance)	☐ MVP
Rider classification	Riders are 'delivery partners' not employees — clear in T&C	☐ MVP
DPIIT Startup India registration	Tax benefits + credibility — file this week	☐ WEEK 1
ABHA/ABDM integration	Optional at MVP, mandatory by Phase 2	☐ LATER

8. Tech Stack — Confirmed

Layer	Technology	Purpose
Frontend	React Native (Expo)	Patient + Pharmacy + Rider apps (single codebase, Android-first)
Backend	Node.js + Express	API server, business logic, order routing
Database	Supabase (PostgreSQL)	All data — orders, users, pharmacies, inventory
Authentication	Firebase OTP (via MSG91)	OTP login for all 4 user types
Payments	Razorpay Route	Auto-split: pharmacy share + rider payout + platform cut
WhatsApp	MSG91 WhatsApp Business API	Order updates, video/photo send, referral code share
Intercity Delivery	Shiprocket API	Rx orders outside 10km radius
Maps	Google Maps SDK + Places API	Nearest pharmacy detection, rider live tracking
Barcode Scan	ML Kit (Google) — camera	Medicine verification before packing
Push Notifications	Firebase Cloud Messaging	Order alerts for all stakeholders
Storage	Supabase Storage / Cloudinary	Prescription photos, medicine videos
Hosting	Railway.app / Render	Backend deployment (cost-effective at MVP scale)

9. 20-Week Build Plan (Phased)

Phase	Weeks	What Gets Built	Milestone
Phase 0 — Foundation	1–3	Supabase schema, Auth (OTP/Gmail), basic API structure, project repo setup	All 4 apps load + login works
Phase 1 — Core Flows	4–8	Patient: browse, search, cart, order. Pharmacy: receive, accept, pack. Rider: accept, navigate, deliver	First test order Maihar → patient
Phase 2 — Trust Features	9–12	Barcode scan + video proof, WhatsApp integration (MSG91), Razorpay Route payment split, live tracking	Video proof sent to patient WhatsApp
Phase 3 — DR Code System	13–15	Doctor portal, referral code generation, patient code entry, analytics dashboard	First DR code order processed
Phase 4 — Polish & Legal	16–18	Schedule H/X flags, Rx storage compliance, COD collection flow, rider payout, OTP delivery confirm	Legally compliant order end-to-end
Phase 5 — Pilot Launch	19–20	Bug fixes, onboard 10 pharmacies Jabalpur, 5 pharmacies Maihar, recruit 20 riders, soft launch	100 orders in 30 days target

10. Scope Control — What NOT to Build in MVP

Every feature you add to MVP = 2 weeks of delay. Stay disciplined.

Feature	Why NOT in MVP	When
AI symptom → medicine recommendation	CDSCO legal violation without licensed doctor	Phase 2 (doctor-reviewed)
Live doctor video consult	Telemedicine license required, too complex	Phase 2
Smart Store hardware bundle	Needs supply chain + hardware ops	Phase 1 post-pilot
Wholesaler POS	Different product, different customer	Phase 2
Insurance Claim Assistant	Complex PDF generation, insurer APIs	Phase 2
ABHA/ABDM full integration	Government API delays, not patient-facing need at MVP	Phase 2
In-app doctor chat	Needs moderation, medical liability	Phase 2
Loyalty points redemption marketplace	Wallet cashback is enough for MVP	Phase 1
Multi-city rollout (Lucknow/Indore)	Fix the loop in Jabalpur first	After pilot success
Web app version	Android app covers 95% of Tier 2/3 users	Phase 2

PharmNest MVP = Speed + Trust + Compliance. Everything else comes after 1000 orders.
